

### **HELIONEPHRO-Medical review**

A new dialysis Unit named after HELIONEPHRO has opened in the island of Rodos since July 2009. It is equipped with 28 state-of-the-art NIKKISSO-DBB-05 dialysis machines with incorporated Blood Pressure monitor and the ability to perform all types of hemodialysis treatment (classic hemodialysis, hemodiafiltration etc). There is availability to provide dialysis treatment in patients with Hepatitis B, Hepatitis C and HIV in separated areas of the Unit. The water treatment facility follows the international water quality standards (double reverse osmosis system) and the water quality control is constantly performed by a specialized lab. The unit is following international protocols of aseptics and antiseptics. The equipment and the consumables used in the Unit are imported from EU companies with international quality certifications. Exclusive treatment may be offered in a separate room with one station. Experienced medical staff is accompanied by a responsible multilingual and internationally trained nursing staff.

### **HELIONEPHRO: Medical facilities in the island of Rhodes**

It could be said that Rhodes, the third largest island in Greece, with a population of approximately 140 thousand residents – increasing by 400% (!) during the tourist season! - is one of the most famous and beautiful tourist destinations in the eastern Mediterranean sea.

It is difficult to refer to all the advantages offered to the tourists. The visitor may make use of more than 20 daily scheduled domestic flights and many charter flights connecting the island with a lot of countries around the world.

Additionally, I would like to stress the sensitive area of Health. In the island of Rhodes there are amenities for the treatment of almost any potential medical condition, rendering it into a safe place for tourists with chronic diseases. Six hundred (!) physicians-specialists of all the medical disciplines are members of the Medical Association of Rhodes and provide valuable services in private practice and in the National Health System (ESY) (Local Medical Points, multipurpose Regional Medical Points, Health Centers and a modern Tertiary General Hospital with a capacity of 360 beds).

With great joy and conscious responsibility, this letter is sent to you, in order to inform you - and through you, all the members of your reputable Association of patients with chronic renal insufficiency- that since a few days, in the existing Health

Services of Rhodes has been incorporated a brand-new Haemodialysis Unit, named HELIONEPHRO. With the appropriate medical responsibility, with excellent medical and paramedical personnel and the assistance of a multitude of experienced doctors-partners from other necessary specialties, a secure and fully organized Dialysis Center may ensure the provision of dialysis services. The visitors on dialysis therapy have the opportunity to enjoy all the pleasures and benefits of the beaches and the other tourist sites of the island of Rhodes.

We guarantee that any kind of unpredicted issues during the stay of the members of your association will be settled on the best possible way, through the Public Relations Office of HELIONEPHRO and the willing cooperation of more than 20 Consular Authorities from various states located in Rhodes.

Finally, we consider important to stress the financial issues for the dialysis services provided to patients from various countries with various insurance providers.

**The services of dialysis treatment will be provided without personal charges for the patient if there is a provisional settlement between the accounting Department of HELIONEPHRO and the Insurance Company of the patient, fully accepting the current compensation fees of the Country of origin.**

We remain at your disposal for any further information or clarification, opting to have a constructive and beneficial cooperation with your association

Sincerely yours

For the Dialysis Unit HELIONEPHRO
